Enjoy quality and precision with every restoration

Opalite® Zirconia custom abutments are the ultimate aesthetic restoration for all implant systems.

These restorations combine the precise accuracy of a titanium interface and the custom CAD/CAM design of a Zirconia abutment to provide a strong, reliable and highly aesthetic abutment.

Each abutment is designed from the restoration down, which allows us to keep the ultimate aesthetic solution in mind. Emergence angles, margins and retention are all carefully crafted in the CAD software to give the patient the most natural look achievable while assuring there is no compromise in strength.

Opalite® Zirconia custom abutments give you a full solution with no hidden costs. Analogue, screw, interface, abutment and restorations are included when treatment planning and costing is given.

All our components are designed and manufactured on our in-house milling facility, therefore we maintain quality and consistency without compromising the materials and design. This also has the added benefit of maintaining the most efficient manufacturing, allowing the Opalite® abutment to be one of the most cost-effective in the marketplace.

Designed with a difference

Opalite® Implants are designed, like most restorations, from the impression. However, what happens next is where it gets interesting. Rather than using the impression as a base and building up to the final restoration we use the Top-Down approach. This technique means we use the final design of the tooth to create the restoration; essentially, we create the final outcome and develop everything else around it. This approach is tried and tested and as one of the most effective methods used in implantology.

> Opalite® Implants have many advantages:

- No need to stock abutments
- Strong enough to be used throughout the mouth
- Biocompatible
- Variety of shading available
- Compatible with most implant systems
- Suitable for single or multiple unit cases

If you'd like to know more about Opalite® Implants please feel free to call us or visit our website to find out exactly how Opalite Implants can work for you.

DTS and Implants

Implants are one of our specialist areas. We have an extremely dedicated team of implant technicians who are highly trained in all aspects of implantology and are experienced in finding solutions to even the most difficult cases. Our expertise in this field has given us the opportunity to work closely with some of the major implantologists in the country and has allowed us to become one of the leading implant labs in the UK.
